Optima Tarnish Protection

Tarnish Protection for Gold and Silver items

Ref. no. 3130400802

Description

Optima Tarnish Protection is a new product that will protect silver, silver alloys and gold alloys from tarnishing. Items treated with it, will not become tarnished in window or cabinet displays or while in storage. Optima Tarnish Protection is odourless and easy to use.

Application

The pieces are simply dipped in the Optima anti-tarnish solution and air dried. The drying process can be augmented by some other source of heat, however, it must be remembered that Optima Anti-Tarnish Dip is inflammable.

Special Advantages

- Quick Drying
- No lingering odour
- Non-poisonous
- Very economical
- Bio-degradable
- Easy to use

Supply Form

Ready for use

Regeneration

Not possible

Special Features

Should slight surface cloudiness become apparent after this procedure, any of the following steps can be taken

- Polishing with a soft cloth
- Heating the piece to around 70°C
- Using our Optima Rinsing Solution

This has been specially developed for the removal of any surface filming or cloudiness. To remove these, immerse the treated, **dry** work pieces in the Optima rinse solution heated to 70-80°C and agitate lightly. Remove the pieces and dry.

Warning!

Chemicals and materials used in electroplating techniques can be corrosive or poisonous. During use, storage, transportation and disposal the appropriate regulations must be observed.
